

Saving water, together.

From giving guests choices about how often their sheets and towels are washed to smarter kitchen and landscaping management, low flow options on property, and more – **America's hotels are working to reduce water consumption.**

Water Conservation

Safe and efficient water practices at our hotels save millions of gallons of water each year.

With laundry accounting for **16 percent** of a hotel's water usage, linen and towel reuse programs can help save water and energy.¹

High-performing water-using equipment like toilets, showerheads, and faucets often use at least **20 percent** less water than standard models.¹

Water-smart landscapes, irrigation systems, leak detection and repair, and efficient pool maintenance ensure we're using less water in our buildings – both on the inside and out.
